PROFESSIONAL SUMMARY

Senior Frontend Developer with 5+ years of experience building web applications with React, Next.js, Vue and Nuxt. Most of my recent work is in fintech: I am currently building Sepah Internet Bank at Omid Tech, and before that I worked on a real-time trading platform, a payment system and a risk management system. My strengths are frontend architecture, SSR and Core Web Vitals, technical SEO, and working closely with designers and backend engineers.

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript (ES2022+)
Frameworks:	Next.js (App Router, Pages Router), React 19, Vue 3, Nuxt 3
Styling & UI:	Tailwind CSS, shadcn/ui, Radix UI, Ant Design, CSS Modules, Sass
State & Data:	TanStack Query (React Query), Zustand, Redux Toolkit, Pinia, Vuex
Validation & i18n:	Zod, i18next, RTL / Persian UI
Performance & SEO:	Core Web Vitals, Lighthouse, SSR / SSG / ISR, Nuxt SEO, structured data (JSON-LD), Open Graph
Testing:	Vitest, Jest, React Testing Library, Vue Test Utils, Playwright
Backend & APIs:	Node.js, Express.js, REST, GraphQL, WebSockets, Directus (headless CMS)
Databases:	PostgreSQL, MySQL, MongoDB
DevOps & Tooling:	Docker, GitHub Actions, GitLab CI, Azure DevOps, Vercel, Netlify, Vite, Webpack, Git
Security & Other:	JWT, OAuth 2.0, httpOnly cookie sessions, PWA, Accessibility (WCAG 2.1)

PROFESSIONAL EXPERIENCE

Senior Frontend Developer

Omid Tech · Sepah Internet Bank

Jun 2026 – Present

Tehran, Iran

- Building the new internet banking platform for Bank Sepah from scratch with Next.js 16, React 19 and TypeScript. Persian-first (RTL) with an English version, light and dark themes, and installable as a PWA.
- Defined the architecture and security rules before the first feature shipped: layer boundaries enforced by ESLint, httpOnly cookie sessions verified on the server on every request, and Zod validation at every boundary.
- Built login with new-device OTP verification, forced password change and password recovery, plus a multi-step signup with remote identity verification (KYC).
- Delivered accounts, cards, statements and loans with installment payments, and money transfers over internal, PAYA, SATNA, card-to-card and card-to-IBAN, with OTP confirmation, receipts, scheduled recurring transfers and an approval workflow.
- Set up unit, integration, E2E and accessibility tests with Vitest and Playwright; the app is deployed with Docker.

Senior Frontend Developer

Trend Marketing Solution

Sep 2025 – Mar 2026

Tehran, Iran

- Architected a multi-module marketing dashboard in Next.js 14 (App Router) with shadcn/ui; used React Server Components for data-heavy views to keep the client-side JavaScript bundle small.
- Integrated the Meta, LinkedIn and Google Ads APIs behind a single OAuth 2.0 adapter layer with token refresh, real-time campaign metrics over Server-Sent Events, and role-based access control (RBAC) enforced in Next.js middleware.
- Designed the user administration module with multi-role access control and optimistic UI updates with React Query for high-frequency workflows.
- Set component authoring standards and code review guidelines adopted by the frontend team; ran weekly architecture syncs with product, design and engineering.

Senior Frontend Developer

May 2025 – Sep 2025

Mahdaad

Tehran, Iran

- Owned full-stack delivery of the Agility blog platform (Nuxt 3 and Directus headless CMS): PostgreSQL schemas, REST API integrations and an ISR caching strategy focused on page performance.
- Led the move from Nuxt UI to the company's internal design system (Pantograph) built on Tailwind CSS, reducing CSS bundle size and standardizing the component API across 3 product squads.
- Implemented Nuxt SEO with structured data (JSON-LD), Open Graph metadata and canonical URLs to improve organic search visibility.
- Led the SSR strategy for article pages, tuning server rendering and caching to improve Time to First Byte (TTFB) and search visibility.

Frontend Developer

Sep 2024 – May 2025

Lamasoo

Tehran, Iran

- Built a hotel booking platform from scratch with Nuxt 3 and Vue 3 on a full SSR architecture, optimized for Core Web Vitals on desktop and mobile.
- Designed the Pinia store architecture for booking state, search filters and user sessions, with state hydrated from server to client to avoid content flashes on page transitions.
- Optimized the image pipeline with Nuxt Image and WebP to reduce page weight and improve LCP on mobile networks.
- Integrated third-party availability and pricing APIs with retries, request deduplication and SWR-style caching to cut redundant API calls.

Frontend Developer

Jul 2023 – Aug 2024

Techonica

Tehran, Iran

- Owned the frontend architecture of the DeltaFX real-time trading platform in Next.js (App Router); built WebSocket-driven live price feeds and improved load performance with code splitting, ISR and lazy-loaded chart libraries.
- Delivered a multi-role payment system (admin, user and provider panels) with JWT-secured route guards, a payment gateway adapter supporting 3 providers, and a transaction audit trail with server-side filtering and pagination.
- Built a Risk Management System with Insight dashboards, customer analytics and transaction monitoring; used TanStack Virtual to keep tables with 10,000+ rows smooth.
- Introduced unit testing with Jest and React Testing Library for core business logic such as payment flows and risk calculations.

Frontend Developer

Nov 2022 – Aug 2023

Aasood

Tehran, Iran

- Migrated two legacy admin panels from jQuery and vanilla JS to React 18 and TypeScript, replacing unmaintained code with a typed, component-based codebase that was easier to maintain.
- Built a modular internal admin panel with reusable components and shared design tokens, which made new feature UI much faster to ship.

Frontend Developer

Feb 2022 – Sep 2022

Tejarat Shayan

Tehran, Iran

- Designed and launched the Ecotam e-commerce web application with Nuxt 3 (beta) and Vue 3 on an SSR architecture: a responsive, accessible and fast storefront.
- Implemented Vue Router navigation with code-split routes and prefetching for faster page transitions.

EDUCATION

Bachelor of Science in Industrial Engineering

2017 – 2022

University of Eyvanakey

Iran

LANGUAGES

Persian (Farsi): Native English: Professional working proficiency
